Resume Summary

Cybersecurity Researcher specializing in Security Operations Center (SOC) operations, including security event monitoring, threat analysis, and incident response. Possesses a complementary background in web design and development, providing a deeper understanding of application-level vulnerabilities and secure website architectures. Passionate about combining defensive security expertise with development knowledge to deliver more secure solutions from the design phase through implementation.

Work Experience

SOC Analyst / Security Analyst

hasanzade finance

Tasks and Achievements

Continuously monitored systems and identified security incidents through log analysis.

Investigated and prioritized security alerts to detect cyber threats, including DDoS attacks, malware, and phishing attempts.

Collaborated with technical teams to respond to security incidents and reduce potential risks.

Documented security events and prepared analytical incident reports.

Web programmer and developer

ravanco

Tasks and Achievements

Designed, developed, and deployed websites and web applications for businesses following a Secure by Design approach, from architecture planning to final deployment.

Identified and mitigated common web vulnerabilities, including SQL Injection, XSS, and CSRF, in developed projects before public release.

Configured and monitored clients' security infrastructure, including firewalls, SSL/TLS configurations, and intrusion detection systems, alongside development activities.

Analyzed server and web application logs and security events, providing security status reports and insights to clients.

Implemented authentication mechanisms, access control systems, and data encryption techniques in web development projects.

Provided security consulting for small and medium-sized businesses to improve web infrastructure security and train technical teams.

O Web Application Support Developer

webzi

Tasks and Achievements

Analyzed clients' technical and security requirements and provided customized solutions based on project scope, budget, and business needs.

Developed and optimized websites with a focus on performance, user experience (UX), and OWASP security standards.

Performed basic penetration testing and vulnerability assessments on delivered infrastructures and web applications.

Deployed and configured servers and management panels following hardening best practices to reduce the attack surface.

Provided ongoing technical and security support after project delivery, including updates, bug fixes, and monitoring of emerging threats.

Worked directly with clients from requirement analysis to final delivery, independently managing project timelines and resources in a freelance environment.

O Web design

Freelance web design projects

Tasks and Achievements

E-commerce Projects

Designed and developed online stores with product management, shopping cart, and online payment gateway features using WordPress/WooCommerce as well as custom development approaches, while applying security best practices to prevent transaction manipulation and protect user data.

Corporate & Service Showcase Websites

Designed and implemented business websites using WordPress and customized themes, including service pages, about sections, and contact forms, with a focus on performance optimization, SEO, and responsive design.

WordPress Deployment & Customization

Configured, deployed, and customized WordPress websites for various clients, including theme selection and customization, plugin installation and configuration, and security hardening against common WordPress threats.

Custom Dashboard & Management Panels

Designed and developed custom administrative dashboards for managing content, users, and business data, including authentication systems and role-based access control (RBAC).

Portfolio & Showcase Websites

Created portfolio websites for artists, freelancers, and personal brands, focusing on modern visual design, engaging user experience, and smooth navigation.

○ bugbounty

Tasks and Achievements

Participate in public bug bounty programs and discover vulnerabilities in various web applications

Report identified vulnerabilities according to the reporting standards of these platforms (including technical description, proof of concept/PoC and proposed solution)

Focus on identifying common vulnerabilities such as: XSS, IDOR, Broken Authentication, CSRF

○ Database Developer Intern

yesnapars

Tasks and Achievements

Designed, implemented, and optimized database schemas using SQL Server, Oracle, and PostgreSQL based on project requirements.

Developed and executed SQL queries, Stored Procedures, and Functions to support application requirements and data processing.

Managed data operations and ensured data accuracy, consistency, and integrity across database systems.

Certificates

○ network plus

Institute: tosinso.com

○ Certified Ethical Hacker

Institute: EC Council

○ python

Institute: nabegheha.com

○ bugbounty

Institute: voorivex.academy

○ TryHackMe

Institute: Completed parts of cybersecurity learning paths and hands-on practical rooms focused on web security, networking, and penetration testing.

Research

○ Cybersecurity Content Translation | Team Project (Web Articles)

Publisher: web articles

Contributed to the team-based translation of several specialized cybersecurity books from English to Persian, covering topics such as network security, web security, and penetration testing.

Collaborated on technical reviews of translated content to ensure accuracy in cybersecurity terminology and concepts.

Project Objective: Helped make reliable and up-to-date cybersecurity resources more accessible to the Persian-speaking community.

Cybersecurity Projects & Vulnerability Discovery

○ Discovered and reported a Remote Code Execution (RCE) vulnerability in the Weblizar WordPress plugin, published on Exploit-DB (EDB-ID: 50969).

Identified a critical security flaw in the Weblizar plugin REST API caused by the unsafe use of the `eval()` function, enabling arbitrary code execution (Remote Code Execution - RCE) on the server.

Developed a practical Proof of Concept (PoC) to demonstrate remote system command execution capabilities.

Officially reported and documented the vulnerability in the Exploit Database (Exploit-DB) with the reference ID EDB-ID: 50969.

Link: www.exploit-db.com/exploits/50969

○ Discovered and documented an Authentication Bypass vulnerability in Hikvision network cameras, published on Exploit-DB (EDB-ID: 50827).

Identified a Hardcoded Backdoor vulnerability in Hikvision surveillance camera devices, enabling complete authentication bypass and unauthorized access to the system.

Demonstrated unauthorized access to user lists, live camera snapshots, and device configuration files without requiring valid credentials.

Officially reported and documented the vulnerability in the Exploit Database (Exploit-DB) with a technical Proof of Concept (PoC) (EDB-ID: 50827).

Presentations

○ Basic Web Security Course Instructor (Online) | In Collaboration with Amirkabir University of Technology

Delivered an online Web Security Fundamentals course, helping students develop a practical and in-depth understanding of common web threats and vulnerabilities.

Designed course materials and training modules based on real-world experience gained from hands-on vulnerability discovery projects.

Taught fundamental web security concepts, including common vulnerabilities, introductory penetration testing principles, and mitigation techniques through practical and easy-to-understand approaches.
